

## TEAM – TECHNOZURE

# TECHNOZURE TRADEBOT

### 1. Idea brief:

The Application is intended to use by stock traders who apply technical analysis to take trades. This app uses machine learning algorithms to produce buy and sell signals. It has got a variety of calculators to calculate several investment returns and investment strategies. It generally aids the user to plan his/her post-retirement life keeping finance in mind.

### 2. Tech Stack:

**Front End:** Java

**Back End:** MySQL

### 3. What positive and unique solutions your idea have?

This application is very unique and generates signals of better accuracy as the strategies are well tried and tested and uniquely generated after due consideration of the existing popular strategies.

4. **Is this your first hackathon? If No, then please share your past experience and achievement with us.**

Yes, this is my first Hackathon and I have participated only in coding contests so far.
